

# MANASE

Manase Water Safety Campaign (WSC) was developed by Manase Construction with a goal to equip people of all ages with the skills and knowledge to make informed decisions about their own safety and protect themselves and others in and around swimming pools.

Based on the premise that most people in Botswana cannot swim or protect themselves and others around pools, it provides information on water safety. The information is disseminated through posters and fl-yers at schools and homes. The campaign is designed for kids and their families to help prevent accidental drowning.

*The key water safety campaign messages are:*

- Know the pool safety precautions
- Teach your children how to swim
- Install a swimming pool fence with an adult only access lock
- LEARN how to swim

Water Safety program materials are free of charge and will also soon be available for download on the Manase website for the public. ([www.manasebotswana.com](http://www.manasebotswana.com))

Info resources

- Swimming Safety Tips
- Water Safety at home
- Basics of CPR
- Water Safety Flyer

### ***Swim Safe, Swim for Life***

Not every Motswana child has the opportunity to learn how to swim. *Swim Safe, Swim for Life* is an initiative by Manase which provides swimming and water safety skills for children experiencing social or economic disadvantage. These are often children who have had limited or no exposure to water or water safety.

With the support of Gaborone Aquatic Centre, Manase sponsors a select number of kids per term at a discounted rate to learn how to swim. Gaborone Aquatic Centre offers swimming lessons, coaching and other aquatic disciplines to people of all ages. Manase also sponsors 2 of it's employees a year to do a 5 week adult swimming class as part of the WSC program.

The public is encouraged to help and support the Manase Water Safety Campaign by making a donation of any amount to the *Swim Safe, Swim for Life* fund. Your donation can save lives, by providing children with the opportunity to learn valuable life skills in water safety and personal survival.
